IS52018C 2018-19 Final Presentation

This will consist of a presentation followed by a question session, all within 10 minutes. The presentations will be scheduled during the lab (12-1, 1-2) and lecture session (3-5) on the 25th March 2019. All groups must upload their powerpoint slides by 4pm, Friday March 15th.

The aim of the presentation is to give a brief overview of your project. 6 months ago your product did not exist but now it does. Tell us what it is and why it is what it is, and how it became what it is. You should cover your motivation, what was your concept and who was this concept derived for, aims/objectives, what was built, how it has been tested, technologies used and why, challenges and solutions.

On the day each team will be presenting in a random order in one of the sessions. Your powerpoint slides will be loaded for you at the podium for you to present as agreed within your team. Do not attempt a live demo, you will not have time. You can of course include photos or screen shots from your product.

The presentation will be assessed on:

- How clearly you describe the purpose and functioning of your system.
- Your account of the software development process as a problem-solving process.
- Technical testing and user evaluation of the software in terms of the original requirements.
- The quality of the presentation and how you handle any questions.

As a rule of thumb, you should allow roughly two minutes per slide, not counting the title. The title slide should include the name of your project, group ID and names of all group members. Include your project number in the name of your powerpoint file.

Each group will be randomly allocated a specific date and time in either a lab session or lecture time on Monday 25th March.

All team members are expected to be in attendance but not everyone is required to participate in the presentation. If you are not in attendance for the presentation without acceptable mitigating circumstances, you will receive a mark of zero.
